PROJECT

Title: Ecommerce Website
Technologies Used:
    Frontend: HTML,CSS,JavaScript
    Backend: PHP, MySQL
Users can register for accounts, Log in securely, and manage their profiles, including viewing order history and updating personal information.Admins can add ,edit,and delete products including details such as name,description,price,images and inventory levels. Products can be organized into categories and subcategories for easy navigation. Customers can add items to their shopping cart,review their selections, and proceed to checkout.Admins can manage the orders from backend, includingviewing order details updating order status, gathering invoices, and sending order confirmation emails to customers. Customers can search for products using keywords and filter results by category, price range.
